                                                                                                                                                                                                                                                                                                                                                                       CC C. glutamicum HA genes (I) can be used in vectors for expression in host CC cells and production of fine chemicals, such as, an organic acid, CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC primidine base, nucleoside, nucleotide, lipid, saturated or unsaturated fatty acid, diol, carbobydrate, aromatic compound, vitamin, cofactor, CC polyketide or enzyme. The amino acids produced can be lysine, glutamine, CC glutamate, alanine, aspartate, glycine, serine, threonine, methionine, CC tyrosine, valine, leucine, isoleucine, arginine, proline, histidine, CC tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are CC used for diagnosing the presence or activity of Corynebacterium or CC used as markers for genetically engineered Corynebacterium or CC used as markers for genetically engineered Corynebacterium or CC used as markers for genetically engineered Corynebacterium or CC different control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the contr

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                              The present invention describes transgenic mice (I) and (II) containing modifications in the factor V gene, where (I) expresses an activated protein C (APC) resistant factor V and (II) lacks the ability to express wild-type factor V. The transgenic animals (I) and (II) are useful for screening compounds with anticoagulant activity. Methods from the present invention, and the transgenic animals, are also useful in providing models for human thrombophilia. These models are useful in providing insight into the basic regulatory mechanisms of blood coagulation and pathogenesis of human thrombosis. In addition, factor V null transgenic mice, especially pregnant females may be used as a model system to test in utero gene replacement therapy protocols. The present sequence

         The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins an antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention.

BASB109 polypeptides and polynucleotides are useful for treating bacterial infections, and as research reagents and materials for the treatment of and diagnosis of diseases, particularly human diseases. They are useful for inducing an immune response in an individual, and to assess the binding of small molecule substrates and ligands in, for e.g. cells, cell-free preparations, chemical libraries, and natural product mixtures. BASB109 polynucleotides are useful for therapeutic or prophylactic purposes, in particular genetic immunisation and in diagnosis of the stage and type of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel BASB109 polypeptides of Moraxella catarrhalis useful for diagnostic, prophylactic and therapeutic purposes against microbial diseases, preferably bacterial infections

                                                                                                                                                                                                                                                    The present sequence encodes a BASB109 polypeptide of Moraxella catarrhalis. BASB109 polypeptides and polynucleotides are useful for treating bacterial infections, and as research reagents and materials for the treatment of and diagnosis of diseases, particularly human diseases. They are useful for inducing an immune response in an individual, and to assess the binding of small molecule substrates and ligands in, for e.g. cells, cell-free preparations, chemical libraries, and natural product mixtures. BASB109 polynucleotides are useful for the rapeutic or prophylactic purposes, in particular genetic immunisation and in diagnosis of the stage and type of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                Claim 13; Page 65; 93pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ü,
                                                  The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                              Genomic library for identifying diagnostic and therapeutic compositions, and for identifying virulence factors, regulatory elements and drug targets comprises Moraxella catarrhalis nucl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-DEC-2006

The present invention describes the full length genome of CC Neisseria meningitidis B (NMB). The sequences in AAF21613 represent fragments of the NMB genomic sequence, as the CC sequence was too long to go in a record on its own it was split into 8 csequences which overlap each other at the beginning and end of each compared to go in a record on its own it was split into 8 csequences which overlap each other at the beginning and end of each compared to go in a record on its own it was split into 8 csequence by 49980 by (i.e. the last 49980 bp of AAF21607 are repeated at the beginning of AAF21607, the last 49980 bp of AAF21544 is repeated at the beginning of AAF21608, and so on). AAF21545 to AAF21598 encode the CC Neisseria proteins given in AAB58550 to AAB58593, and AAF21598 to of CC AAF21606 represent PCR primers which are used in the exemplification of CC the present invention. The NMB genome and fragments from it have cantibacterial activity, and can be used in vaccines and gene therapy. CC Neisseria mucleic acids, proteins and/or antibodies which binds to the proteins can be used in compositions for treating or preventing infection CC proteins can be used in compositions for treating or preventing the computers. Computers, computer memory, computer storage medium or computer CC databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are more offercive in vaccines than the outer membrane norteins currently are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Galeotti C,

CC proteins from Neisseria genomic sequences. AAA81431 to AAA81244
CC represent specifically claimed Neisseria meningitidis genomic DNA
CC sequences; AAA81260 to AAA81303 and AAB25620 to AAA81254
CC Neisseria DNA sequences and their corresponding proteins; AAA81254 to
CC AAA81259 and AAA81304 to AAA81331 represent PCR primers used in the
CC isolation of Neisseria meningitidis DNA sequences; and AAA81254 to
CC AAA81452 represent Neisseria meningitidis DNA sequences; and AAA81224 to
CC CAAA81452 represent Neisseria meningitidis MenB polynucleotide ORF
CC sequences, which are all used in the exemplification of the present
CC invention. The nucleic acid sequences, protein sequences, and antibodies
CC degainst them, can be used in the manufacture of a composition. The
CC medicament) for treating, preventing or diagnosing infection due to
CC medicament) for treating, preventing or diagnosing infection due to
CC medicament) for treating, preventing or diagnosing infection due to
CC medicament of vaccines against Meningococcus B; against all serotypes;
CC and/or against all pathogenic Neissariae. Identified proteins could
CC be components of vaccines against Meningococcus B; against all serotypes;
CC from the bacterium will also facilitate production of biological probes,
CC meningococcus B vaccines have failed mainly due to make efficacious
CC meningococcus B vaccines have failed mainly due to antigen tolerance.
CC Multivalent vaccines have also been tried but none have successfully
CC overcome antigenic variability. The provision of further, complete
CC exposed proteins that may be presumed targets for the immune system and
CC which are not antigenically variable or at least more conserved than
CC other more variable regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleotide sequences of Neisseria meningitidis which can be used in the diagnosis and treatment of N. meningitidis infection and other Neisserial infections, for example, N.gonorrhoea -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins an antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1176 BP; 285 A; 371 C;

composition can be used as a medicament for in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                                                                                                                                                                                                                                     proteins from Neisseria genomic sequences. AAA8145 to AAA82114 represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA8120 to AAA8130 and AAB25620 to AAB25663 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and AAA81304 to AAA81321 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences, and AAA81322 to AAA81452 represent Neisseria meningitidis MRB polynucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleotide sequences of Neisseria meningitidis which used in the diagnosis and treatment of N. meningitidis infections, for example, N.gonorrhoea -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences proteins from Moraxella catarrhalis. These can be used to produc vaccines which protect against M. catarrhalis infection, which otitis media, respiratory infection, sinusitus, and pneumonia. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunizing pneumonia,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ঠ
     Sequences AAS59506-AAS59804 represent DNA molecules encoding Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and onverved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-APR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU42549-42961, AAU67480 and AAU67481. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                           AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54576 and AAZ54576 and AAZ54716 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, annibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention

```

The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the mucleic acid molecules encoding the proteins antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-10-088-045-2 (1-502) x AAZ53038
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.

                                                                                                                                                                                                                                                                                                                                                    represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ5456 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fraser C, Galeotti C, Grandi (Petersen J, Pizza M, Rappuoli Tettelin H, Venter JC;

The present invention describes methods of obtaining immunogenic CC proteins from Neisseria genomic sequences. AAAB1453 to AAAB2144 CC represent.specifically claimed Neisseria meningitidis genomic DNA CC sequences; AAAB1260 to AAAB1303 and AAB25620 to AAB2563 represent CC Neisseria DNA sequences and their corresponding proteins; AAAB1254 to CAAAB1259 and AAAB1304 to AAAB1321 represent PCR primers used in the CC isolation of Neisseria meningitidis DNA sequences; and AAAB1322 to AAAB1452 represent Neisseria meningitidis Men Bolynucleotide ORF CC sequences, which are all used in the exemplification of the present CC invention. The nucleic acid sequences, protein sequences, and antibodies composition can be used in the manufacture of a composition. The CC spainst them, can be used in the manufacture of a composition can be used as a medicament (or in the manufacture of a composition can be used as a medicament of in the manufacture of a composition can be used as a medicament of in the manufacture of a composition can be used as a medicament of a gainst the components of vaccines against Meningococcus B; against all pathogenic Neissariae. Identification of sequences; and/or against all pathogenic Neissariae. Identification of sequences, from the bacterium will also facilitate production of biological probes, CC particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. CC will transpared to a sequences may provide an opportunity to identify secreted or surface ce sequences may provide an opportunity to identify secreted or surface.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

                                                                                                                                                                                                                                                                                                                                   sequences which overlap each other at the beginning and end of each consequence by 49980 bp (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of AAF21607, the last 49980 bp of AAF21544 is repeated at the beginning of AAF21608, and so on). AAF21545 to AAF21588 encode the consistency of AAF21608, and so on). AAF21545 to AAF21588 encode the present proteins given in AAB58550 to AAB58593, and AAF21589 to AAF21608 represent PCR primers which are used in the exemplification of the present invention. The NMB genome and fragments from it have antibacterial activity, and can be used in vaccines and gene therapy. One isserial activity, and can be used in vaccines and gene therapy. One isserial bacteria or as a diagnostic reagent for detection the to Neisserial bacteria or of antibodies which binds to the presence of Neisserial bacteria or of antibodies raised to Neisserial bacteria or of antibodies raised to Neisserial bacteria. Computer memory, computer storage medium or computer databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are considered in a second to the other proteins currently used.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes the full length genome of Neisseria meningitidis B (NMB). The sequences in AAF21644 and AAF21607 to AAF21613 represent fragments of the NMB genomic sequence, as the sequence was too long to go in a record on its own it was split into 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Neisseria meningitidis B full length frames are used to detect, treat and

Isolated nucleotide sequences of Neisseria meningitidis which used in the diagnosis and treatment of N. meningitidis infectiother Neisserial infections, for example, N.gonorrhoea infection can be and

Claim 7; Page 866-1272; 1760pp; English.

Neisseria DNA sequences and their corresponding proteins; ApaB1254 to AAAB1259 and AAAB1304 to AAAB131 represent PCR primers used in the cisotration of Neisseria meningitidis DNA sequences; and AAAB1322 to AAAB1452 represent Neisseria meningitidis MenB polynucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The medicament for treating, preventing or diagnosing infection due to medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all serotypes; and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious williant also been tried but to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences, AAA81260 to AAA81303 and AAB25620 to AAB25663 represent The present invention describes methods of obtaining more variable regions g immunogenic to AAA82414

                                                                                                                                                                                                                                          Fraser C, Ga.
Petersen J,
AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 341

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54575 to AAZ54576 and AAZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to manufacture of medicaments for treating or preventing infection due to

                                                                                                                                                                                                                                                                                                                     AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54576 and AAZ54576 and AAZ54710. The PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the
                                                                                                                                                                                                                                   presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                     Sequence 342

               Purified cytochrome c-553 (CO) was isolation from Gluconobacter suboxydans IFO 1258 and partially sequenced. From this information, 32P-labelled oligonuclectide probes were constructed and used to screen a bank of genomic EcoRI fragments from IFO 1258 in vector 13mp19RF. A plasmid which hybridised strongly contained an approx. 1.5kb fragment which was sequenced. This sequence lacks the N-terminal region which was located from the same source and used to construct a complete gene. The probes used are based on the N-terminal amino acid sequence (KGWGNNA) of peptide I which was isolated following limited hydrolysis of c-553 (CO) using arginyl endopeptidase. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                    Plasmid contg. gene for cytochrome C-553 (CO) - and transformed cells useful in high productivity oxidative fermentation, e.g. ethanol to acetic acid
                                                                                                                                                                                                                                                                                Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Shimizu
